

## National Patterns of R&D Resources: 2015–16 Data Update

Detailed Statistical Tables | NSF 18-309 | May 2018 (Revised June 2018)

**Erratum:** The contents list of data tables contained an incorrect label. The list has been corrected in the web and PDF views. The tables and data are unchanged.

### General Notes

---

*National Patterns of R&D Resources* provides current data on the levels and key trends of the performance and funding of research and experimental development (R&D) in the United States. The statistical tables included in this Data Update supplement the recent InfoBrief (December 2017, available at <https://www.nsf.gov/statistics/2018/nsf18306>) by the National Center for Science and Engineering Statistics (NCSES) that discusses the *National Patterns* findings for 2015–16.

The *National Patterns* statistics draw primarily from NCSES’s national surveys of the R&D expenditures and funding of the organizations that perform the bulk of U.S. R&D—including businesses, federal and nonfederal government, higher education, and other nonprofit organizations. Additional details on levels and trends are provided by type of R&D performed (i.e., basic research, applied research, and experimental development). The *National Patterns* data are reported in both current and inflation-adjusted dollars, with comparisons to the historical record for U.S. R&D (back to 1953) and to the corresponding pace of overall U.S. economic growth.

The data for 2016 are “estimates” based mainly on early findings from the 2016 sectoral R&D expenditure surveys and evident recent trends. The data for 2015 were included in the previous edition (2014–15) of this report series but are now revised to reflect new, nearly final input from the sectoral surveys; they are marked “preliminary,” because some of the sectoral components still lack final data. The numbers for 1953–2014 reflect mainly final survey data that normally would include only minor revisions. This Data Update, however, includes some significant changes in the numbers for the higher education sector due to methodological updates applied from the late 1990s onward (see the section Methodology below).

The statistical tables are arranged to exhibit the U.S. R&D data from two differing perspectives. The first perspective (tables 2–5) is by type of R&D performer, with subsequent breakouts by the source of funds. The second perspective (tables 6–9) is by source of funds, with subsequent breakouts by type of performer. The data in both groups of tables sum to the same overall U.S. R&D performance totals. Table 1 provides data mainly on the U.S. R&D-to-gross domestic product (GDP) ratio and its components. Table 10 presents state-level breakdowns of the U.S. R&D totals, by performing sector and source of funds, for 2015.

For trend comparisons, use only the historical data from the most recent publication, which incorporates the latest revisions and corrections. Do not use data published earlier.

## Data Tables

---

Table	Table Title
	<b>U.S. gross domestic product and R&amp;D: 1953–2016</b>
1	Gross domestic product, total R&D, ratio of R&D to gross domestic product
	<b>U.S. R&amp;D expenditures</b>

GDP = gross domestic product; R&D = research and development.

<sup>a</sup> Implicit price deflator for GDP.

<sup>b</sup> Includes federal intramural R&D and that by federally funded R&D centers.

<sup>c</sup> Includes R&D in the United States performed by nonfederal government and other nonprofit organizations.

<sup>d</sup> Includes funding for U.S. R&D by nonfederal government, higher education, and other nonprofit organizations.

<sup>e</sup> Data for 2015 are preliminary and may later be revised.

<sup>f</sup> Data for 2016 are estimates and will later be revised.

NOTE: Detail may not add to total because of rounding.

SOURCES: GDP figures from Bureau of Economic Analysis, National Economic Accounts, Gross Domestic Product, <https://www.bea.gov/national/>, accessed 29 August 2017; R&D figures from National Science Foundation, National Center for Science and Engineering Statistics, National Patterns of R&D Resources (annual series).

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> Includes expenditures for federal intramural R&D as well as costs associated with administering extramural R&D.

<sup>b</sup> The R&D expenditures of FFRDCs are chiefly federally funded; the small remainder (\$362 million of the \$18.6 billion total in 2015) reflects funding from state or local government, businesses, other nonprofit organizations, and other sources (see Table 6 for further detail on this nonfederal funding). Before 2001, the data did not distinguish federal and nonfederal funding for FFRDC R&D and are reported as all federal funding. In 1953–54, federal funding for business R&D did not separate out industry-administered FFRDCs, and the data for federal funding to business for these years includes the funding to these FFRDCs. Also in 1953–54, federal funding for other nonprofit organizations did not separate out nonprofit-administered FFRDCs, and the data for federal funding to other nonprofit organizations for these years include the funding to these FFRDCs.

<sup>c</sup> State intramural R&D performance includes state agency and department employees and also services performed by others in support of internal R&D projects. Includes funding from both federal and nonfederal government sources (see Table 6 for further detail). Data on state government intramural R&D became available starting in 2006.

<sup>d</sup> R&D performed in the domestic United States by all companies with five or more employees, publicly or privately held. In 2008 and later years, the data on business R&D come from the National Science Foundation's (NSF's) annual Business R&D and Innovation Survey (BRDIS). BRDIS distinguishes R&D performed and paid for by the company from R&D performed by the company but paid for by one or more others (i.e., the federal government, state or local government, domestic companies, foreign companies, foreign governments, other organizations inside or outside the United States). Before 2008, the data distinguished only federally and nonfederally funded business R&D; for these years, the own funding data column includes all nonfederal sources of funding. Business R&D performance in the United States paid for by foreign business includes funding from parent or unaffiliated businesses outside the United States (\$16.3 billion in 2015) and funding from U.S. businesses' foreign subsidiaries (\$6.8 billion in 2015). Business R&D performance funded by other sources includes U.S. state government, foreign government, and all other sources in the United States and abroad.

<sup>e</sup> Before 2003, higher education R&D covered only S&E fields; in 2003 and later years, R&D in non-S&E fields is also included. (Non-S&E R&D was \$1.4 billion in 2003 and \$3.7 billion in 2015.) In 1998 and later years, the higher education R&D data have been adjusted to eliminate double counting of R&D funds passed through from academic institutions to other academic and nonacademic (businesses, nonprofit organizations, others) subrecipients. (In FY 1998, the total of pass-through funds reported was \$994 million, with \$479 million to other academic recipients and \$337 million nonacademic recipients. In FY 2015, total pass-through was \$5.640 billion, with \$3.107 billion to other academic recipients and \$2.537 billion to nonacademic recipients.) The nonfederal government funding category includes support from state and local government. The other nonprofit funding category includes support from nonprofit organizations and other sources not elsewhere classified (in 2015, \$4.139 billion was from nonprofit organizations, and \$2.020 billion was from these unclassified other sources).

<sup>f</sup> The data on other nonprofit R&D funded by the federal government come from NSF's annual Federal Funds for R&D survey. The other nonprofit R&D funded by nonfederal government is included in the ONP category. The 1998–2015 data for other components funded by businesses and by the nonprofit sector itself are estimated, based on parameters from the 1996–97 Survey of R&D Funding and Performance by Nonprofit Organizations.

<sup>g</sup> Some data for 2015 are preliminary and may later be revised.

<sup>h</sup> The data for 2016 are estimates and will later be revised.

NOTES: Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For trend comparisons, use only the historical data reported in this table because some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in NSF's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, Survey of State Government R&D. R&D expenditures by business performers—and, before 2001, also industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data. For federal performers in 1977 and afterwards, the approximation equals 75% of the amount reported in the same fiscal year plus 25% of the amount reported in the subsequent fiscal year. Prior to 1977, the federal fiscal year began on 1 July, not 1 October, and the approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year. The fiscal year for higher education performers and state government performers generally begins 1 July, and the calendar year approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year.

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> See Table 2, footnote a.

<sup>b</sup> Type-of-R&D data for FFRDC R&D in 1953–54 include the R&D of only university-administered FFRDCs. Starting in 2001, type-of-R&D data distinguish federally funded from nonfederally funded FFRDC R&D. (See also Table 2, footnote b.)

<sup>c</sup> Type-of-R&D data for state intramural R&D are not currently collected by the Survey of State Government R&D. (See also Table 2, footnote c.)

<sup>d</sup> Type-of-R&D data for business R&D in 1998–2007 were revised in response to data quality review considerations and are not directly comparable with the data for 1997 and earlier years. For 2008 and later years, the type-of-R&D splits for other than total, own-funded, and federally funded R&D are estimated. (See also Table 2, footnote d.)

<sup>e</sup> The type-of-R&D estimation procedure for higher education R&D was revised in 1998 and again in 2010; hence, these data are not directly comparable with data reported for earlier years. Type-of-R&D splits for other than total and federally funded are estimated. (See also Table 2, footnote e.)

<sup>f</sup> Type-of-R&D data for R&D by other nonprofit organizations in 1998 and later years are estimated, except for the R&D that is federally funded. (See also Table 2, footnote f.)

<sup>g</sup> Some data for 2015 are preliminary and may later be revised.

<sup>h</sup> The data for 2016 are estimates and will later be revised.

NOTES: Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For trend comparisons, use only the historical data reported in this table because some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data. For federal performers in 1977 and afterward, the approximation equals 75% of the amount reported in the same fiscal year plus 25% of the amount reported in the subsequent fiscal year. Before 1977, the federal fiscal year began on 1 July, not 1 October, and the approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year. The fiscal year for higher education performers and state government performers generally begins 1 July, and the calendar year approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year.

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> See Table 2, footnote a.

<sup>b</sup> Type-of-R&D data for FFRDC R&D in 1953–54 include the R&D of only university-administered FFRDCs. Starting in 2001, type-of-R&D data distinguish federally funded from nonfederally funded FFRDC R&D. (See also Table 2, footnote b.)

<sup>c</sup> Type-of-R&D data for state intramural R&D are not currently collected by the Survey of State Government R&D. (See also Table 2, footnote c.)

<sup>d</sup> Type-of-R&D data for business R&D in 1998–2007 were revised in response to data quality review considerations and are not directly comparable with the data for 1997 and earlier years. For 2008 and later years, the type-of-R&D splits for other than total, own-funded, and federally funded R&D are estimated. (See also Table 2, footnote d.)

<sup>e</sup> The type-of-R&D estimation procedure for higher education R&D was revised in 1998 and again in 2010; hence, these data are not directly comparable with data reported for earlier years. Type-of-R&D splits for other than total and federally funded are estimated. (See also Table 2, footnote e.)

<sup>f</sup> Type-of-R&D data for R&D by other nonprofit organizations in 1998 and later years are estimated, except for the R&D that is federally funded. (See also Table 2, footnote f.)

<sup>g</sup> Some data for 2015 are preliminary and may later be revised.

<sup>h</sup> The data for 2016 are estimates and will later be revised.

NOTES: Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For trend comparisons, use only the historical data reported in this table because some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data. For federal performers in 1977 and afterward, the approximation equals 75% of the amount reported in the same fiscal year plus 25% of the amount reported in the subsequent fiscal year. Before 1977, the federal fiscal year began on 1 July, not 1 October, and the approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year. The fiscal year for higher education performers and state government performers generally begins 1 July, and the calendar year approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year.

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> See Table 2, footnote a.

<sup>b</sup> Type-of-R&D data for FFRDC R&D in 1953–54 includes the R&D of only university-administered FFRDCs. Starting in 2001, type-of-R&D data distinguish federally funded from nonfederally funded FFRDC R&D. (See also Table 2, footnote b.)

<sup>c</sup> Type-of-R&D data for state intramural R&D are not currently collected by the Survey of State Government R&D. (See also Table 2, footnote c.)

<sup>d</sup> Type-of-R&D data for business R&D in 1998–2007 were revised in response to data quality review considerations and are not directly comparable with the data for 1997 and earlier years. For 2008 and later years, the type-of-R&D splits for other than total, own-funded, and federally funded R&D are estimated. (See also Table 2, footnote d.)

<sup>e</sup> The type-of-R&D estimation procedure for higher education R&D was revised in 1998 and again in 2010; hence, these data are not directly comparable with data reported for earlier years. Type-of-R&D splits for other than total and federally funded are estimated. (See also Table 2, footnote e.)

<sup>f</sup> Type-of-R&D data for R&D by other nonprofit organizations in 1998 and later years are estimated, except for the R&D that is federally funded. (See also Table 2, footnote f.)

<sup>g</sup> Some data for 2015 are preliminary and may later be revised.

<sup>h</sup> The data for 2016 are estimates and will later be revised.

NOTES: Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For trend comparisons, use only the historical data reported in this table, as some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data. For federal performers in 1977 and afterward, the approximation equals 75% of the amount reported in the same fiscal year plus 25% of the amount reported in the subsequent fiscal year. Before 1977, the federal fiscal year began on 1 July, not 1 October, and the approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year. The fiscal year for higher education performers and state government performers generally begins 1 July, and the calendar year approximation is 50% of the amount reported in the same fiscal year plus 50% of the amount reported in the subsequent fiscal year.

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> Some data for 2015 are preliminary and may later be revised.

<sup>b</sup> The data for 2016 are estimates and will later be revised.

NOTES: This table reaggregates the R&D performer data in Table 2 according to major categories of R&D funding: federal government, nonfederal government (state and local), business, higher education, and other nonprofit organizations. Business sources of R&D funding in this table include the own funds of domestic R&D performing businesses, funds from other domestic businesses, and funds from foreign businesses. For interpretive detail on the R&D performers listed, see Table 2, footnotes a–f. Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For trend comparisons, use only the historical data reported in this table, as some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data (see Table 2, general notes). The 1998–2015 data for ONP R&D performance funded by businesses and the nonprofit sector itself are estimated, based on parameters from the 1996–97 Survey of R&D Funding and Performance by Nonprofit Organizations.

SOURCE: National Science Foundation, National Center for Science and Engineering Statistics, National Patterns of R&D Resources (annual series).

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organizations.

<sup>a</sup> Some data for 2015 are preliminary and may later be revised.

<sup>b</sup> The data for 2016 are estimates and will later be revised.

NOTES: This table reaggregates the R&D performer data in Table 3 according to major categories of R&D funding: federal government, nonfederal government (state and local), business, higher education, and other nonprofit organizations. Business sources of R&D funding in this table include the own funds of domestic R&D performing businesses, funds from other domestic businesses, and funds from foreign businesses. For interpretive detail on the R&D performers listed, see Table 2, footnotes a–f. Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For comparisons, use only the historical data reported in this table because some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data (see Table 3, general notes). The 1998–2015 data for ONP R&D performance funded by businesses and the nonprofit sector itself are estimated, based on parameters from the 1996–97 Survey of R&D Funding and Performance by Nonprofit Organizations. Type-of-R&D data for business R&D in 1998–2007 were revised in response to data quality review considerations and are not directly comparable with the data for 1997 and earlier years. For 2008 and onward, the type-of-R&D splits for other than total, own-funded, and federally funded R&D are estimated (see also Table 2, footnote d). Type-of-R&D data for FFRDC R&D in 1953–54 includes only those of university-administered FFRDCs. Starting in 2001, type-of-R&D data distinguish federally funded from nonfederally funded FFRDC R&D (see also Table 2, footnote b). The type-of-R&D estimation procedure for higher education R&D was revised in 1998 and again in 2010; hence, these data are not directly comparable with data reported for earlier years. Furthermore, the type-of-R&D splits for other than total and federally funded are estimated (see also Table 2, footnote e). Type-of-R&D data for R&D by other nonprofit organizations in 1998 and later years are estimated, except for those that are federally funded (see also Table 2, footnote f). Type-of-R&D data for state intramural R&D are not currently collected by the Survey of State Government R&D (see also Table 2, footnote c).

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> Some data for 2015 are preliminary and may later be revised.

<sup>b</sup> The data for 2016 are estimates and will later be revised.

NOTES: This table reaggregates the R&D performer data in Table 4 according to major categories of R&D funding: federal government, nonfederal government (state and local), business, higher education, and other nonprofit organizations. Business sources of R&D funding in this table include the own funds of domestic R&D performing businesses, funds from other domestic businesses, and funds from foreign businesses. For interpretive detail on the R&D performers listed, see Table 2, footnotes a–f. Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For comparisons, use only the historical data reported in this table because some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data (see Table 4, general notes). The 1998–2015 data for ONP R&D performance funded by businesses and the nonprofit sector itself are estimated, based on parameters from the 1996–97 Survey of R&D Funding and Performance by Nonprofit Organizations. Type-of-R&D data for business R&D in 1998–2007 were revised in response to data quality review considerations and are not directly comparable with the data for 1997 and earlier years. For 2008 and onward, the type-of-R&D splits for other than total, own-funded, and federally funded R&D are estimated (see also Table 2, footnote d). Type-of-R&D data for FFRDC R&D in 1953–54 includes only those of university-administered FFRDCs. Starting in 2001, type-of-R&D data distinguish federally funded from nonfederally funded FFRDC R&D (see also Table 2, footnote b). The type-of-R&D estimation procedure for higher education R&D was revised in 1998 and again in 2010; hence, these data are not directly comparable with data reported for earlier years. Furthermore, the type-of-R&D splits for other than total and federally funded are estimated (see also Table 2, footnote e). Type-of-R&D data for R&D by other nonprofit organizations in 1998 and later years are estimated, except for those that are federally funded (see also Table 2, footnote f). Type-of-R&D data for state intramural R&D are not currently collected by the Survey of State Government R&D (see also Table 2, footnote c).

NA = not available.

FFRDC = federally funded research and development center; ONP = other nonprofit organization.

<sup>a</sup> Some data for 2015 are preliminary and may later be revised.

<sup>b</sup> The data for 2016 are estimates and will later be revised.

NOTES: This table reaggregates the R&D performer data in Table 5 according to major categories of R&D funding: federal government, nonfederal government (state and local), business, higher education, and other nonprofit organizations. Business sources of R&D funding in this table include the own funds of domestic R&D performing businesses, funds from other domestic businesses, and funds from foreign businesses. For interpretive detail on the R&D performers listed, see Table 2, footnotes a–f. Detail may not add to total because of rounding. Constant-dollar estimates are derived from unrounded data. For comparisons, use only the historical data reported in this table because some back-year data may have been revised. Except for the nonprofit sector, data are based on annual reports by performers in the National Science Foundation's annual R&D expenditure surveys: Business R&D and Innovation Survey, Higher Education R&D Survey, Survey of Federal Funds for R&D, FFRDC R&D Expenditures Survey, and Survey of State Government R&D. R&D expenditures by business performers—and also, before 2001, industry-administered FFRDCs—are collected on a calendar year basis. Expenditures for other performers are calendar year approximations based on fiscal year data (see Table 5, general notes). The 1998–2015 data for ONP R&D performance funded by businesses and the nonprofit sector itself are estimated, based on parameters from the 1996–97 Survey of R&D Funding and Performance by Nonprofit Organizations. Type-of-R&D data for business R&D in 1998–2007 were revised in response to data quality review considerations and are not directly comparable with the data for 1997 and earlier years. For 2008 and onward, the type-of-R&D splits for other than total, own-funded, and federally funded R&D are estimated (see also Table 2, footnote d). Type-of-R&D data for FFRDC R&D in 1953–54 include only those of university-administered FFRDCs. Starting in 2001, type-of-R&D data distinguish federally funded from nonfederally funded FFRDC R&D (see also Table 2, footnote b). The type-of-R&D estimation procedure for higher education R&D was revised in 1998 and again in 2010; hence, these data are not directly comparable with data reported for earlier years. Furthermore, the type-of-R&D splits for other than total and federally funded are estimated (see also Table 2, footnote e). Type-of-R&D data for R&D by other nonprofit organizations in 1998 and later years are estimated, except for those that are federally funded (see also Table 2, footnote f). Type-of-R&D data for state intramural R&D are not currently collected by the Survey of State Government R&D (see also Table 2, footnote c).

Table 10. U.S. R&D expenditures, by state, performing sector, and source of funds: 2015  
(Millions of current dollars)

State	All R&D	Per- former: R&D rank	Performer: Federal		FFRDCs		Business				Higher education <sup>a</sup>				Other nonprofit institutions		State, internal <sup>b</sup>	R&D intensity <sup>c</sup>						
			Source of funds:		Federal	Total	Fed- eral	Non- federal <sup>d</sup>	Total	Paid by others		Total	Federal	Other government	Busi- ness	Higher ed- ucation	Non- profit	Other	Federal <sup>f</sup>	Total	GDP	rank	Per- cent	Rank
			Federal	Total						Non- federal <sup>e</sup>	Fed- eral													
U.S. undistributed <sup>h</sup>	14,090	na	3,586	0	0	0	10,504	8,188	D	0	0	0	0	0	0	0	0	0	0	0	na	na	na	
Puerto Rico <sup>i</sup>	137	na	6	0	0	0	NA	NA	NA	NA	127	88	4	4	29	1	1	*	4	103,100	na	NA	na	
Other <sup>j</sup>	263	na	235	0	0	0	0	0	0	0	28	26	*	*	*	*	1	*	na	na	na	na	na	

\* = < \$0.5 million; D = data withheld to avoid disclosing operations of individual companies; na = not applicable; NA = not available.

FFRDC = federally funded research and development center; GDP = gross domestic product.

<sup>a</sup> State-level higher education R&D data have not been adjusted to eliminate the double counting of all pass-through funding. At the national level, funds passed through to educational subrecipients accounted for 8.2% of total R&D expenditures reported by universities and colleges in FY 2015.

<sup>b</sup> Internal performers include state agency and department employees and also services performed by others in support of an internal R&D project.

<sup>c</sup> R&D intensity is the ratio of total R&D performed in a state to its state GDP.

<sup>d</sup> Nonfederal sources of R&D expenditures reported by FFRDCs in FY 2015 included state and local governments (\$18 million), business (\$209 million), nonprofit organizations (\$28 million), and all other sources (\$106 million).

<sup>e</sup> R&D paid for by nonfederal sources includes funding from other companies located inside (\$15 billion) or outside (\$16 billion) the United States, U.S. state government agencies (\$127 million), foreign government agencies and laboratories (\$572 million), other organizations located inside (\$489 million) or outside (\$54 million) the United States.

<sup>f</sup> Other sources of support for nonprofit institutions were unavailable by state. In 2015, total nonprofit performance is estimated at \$19.7 billion. Business provided an estimated \$1.6 billion to the nonprofit sector, and nonprofit institutions provided an estimated \$12.0 billion.

<sup>g</sup> States totals differ from U.S. totals for several reasons: (1) some R&D expenditures cannot be allocated to 1 of 50 states or the District of Columbia; (2) nonfederal sources of other nonprofit R&D expenditures could not be allocated by state; (3) state-level higher education data have not been adjusted to eliminate double counting of funds passed through from one academic institution to another; and (4) state-level R&D data are not converted from fiscal years to calendar years.

<sup>h</sup> Reported data that could not be assigned to 1 of the 50 states or the District of Columbia.

<sup>i</sup> Data on business R&D performance in Puerto Rico are not collected.

<sup>j</sup> Includes R&D expenditures reported for outlying areas (Guam, Virgin Islands, American Samoa) and offices abroad but excluding Puerto Rico.

NOTE: Business R&D data refer to calendar years; the data for the other R&D performers refer to fiscal years but are used here as approximations to calendar year data.

SOURCES: National Science Foundation, National Center for Science and Engineering Statistics, National Patterns of R&D Resources (annual series). State GDP data are from the U.S. Bureau of Economic Analysis, <http://www.bea.gov/regional/index.htm>, accessed 17 June 2017.

## Appendix. Technical Notes

---

### Overview of 2015–16 Data Update

*National Patterns of R&D Resources* provides current data on the levels and key trends of the performance and funding of research and experimental development in the United States, with comparisons to the historical record (back to 1953). Detail is also provided for the U.S. total and by performer according to the types of R&D conducted (i.e., basic research, applied research, and experimental development).

### Key Information on Publication Series

*Report frequency.* Reports in this series are typically published annually.

*Current reference period.* Data from 1953 to 2016 are provided for almost all variables. The data for 2016 are estimates and not previously reported in this series. The data for 2015 are revised from the previous edition (2014–15) of this series. The data for 1953–2014 reflect final data that may still include some further (typically minor) revisions.

### Survey Data Sources for *National Patterns*

The *National Patterns* statistics draw primarily from NCSES’s annual national surveys of the R&D expenditures and funding of the organizations that perform the bulk of U.S. R&D. These organizations include the business sector, federal and nonfederal government, higher education, and other nonprofit organizations. Each of these sectors are summarized—including links to other sections of the NCSES website with specifics on survey coverage, variables collected, and survey/sampling implementation—in the sections below.

#### ***Business Sector***

For 2008 and later years, annual data on the R&D performed in the domestic United States by the business sector come from NCSES’s Business Research and Development and Innovation Survey (BRDIS; cosponsored with the U.S. Census Bureau [<https://www.nsf.gov/statistics/srvyindustry/>]). BRDIS is a sample survey of companies in manufacturing and nonmanufacturing industries, designed to be nationally representative of all for-profit companies (publicly or privately held) with 5 employees or more in the United States (typically, a sample of around 44,000 companies representing a national population of around 2 million companies). Key variables covered include R&D performance (in the United States and worldwide); total and R&D employment (in the United States and worldwide); sources of R&D funding; the type of R&D activities (basic research, applied research, experimental development); type of R&D costs; R&D capital expenditures; R&D application and technology focus areas; geographic location (within the United States and in foreign countries); sales (in the United States and worldwide); patenting, licensing, other technology transfer activities; and innovation indicators.

For 2007 and earlier years, data come from the NCSES Survey of Industrial Research and Development (SIRD), the predecessor to BRDIS (<https://www.nsf.gov/statistics/srvyindustry/sird.cfm>). SIRD was also a sample survey, conducted annually (1953–2007), that provided national estimates of the R&D performed within the United States by industrial firms, whether U.S. or foreign owned. The SIRD target population consisted (same as BRDIS) of all for-profit companies with 5 employees or more, manufacturing and nonmanufacturing, that performed R&D in the United States.

#### ***Federal Government***

Federal intramural R&D. Data on the intramural R&D performed by the federal government comes from NCSES’s Survey of Federal Funds for Research and Development (Federal Funds Survey), which is

completed annually by all federal agencies conducting R&D programs (approximately 28 federal departments or independent agencies; <https://www.nsf.gov/statistics/srvyfedfunds/>). The Federal Funds Survey data provide intramural R&D totals as outlays and obligations on a federal fiscal-year basis. The obligations data are further detailed by federal agency, performer, type of R&D, geographical area, and field of science or engineering (for research, not for development). (Note: data on federal intramural R&D plant reported by the Federal Funds Survey are not included as a component in the *National Patterns* total of federal intramural R&D.)

Federally funded R&D centers (FFRDCs). The nation's FFRDCs are a second venue of federal R&D performance. (Currently, there are 41 FFRDCs, although the number can change from year to year; NCSSES maintains a Master List of the population of FFRDCs, which it regularly updates [<https://www.nsf.gov/statistics/ffrdclist/>].) FFRDCs are R&D-performing organizations administered by an industrial firm, a university, a nonprofit institution, or a consortium but that have funding exclusively or substantially from the federal government. An FFRDC is operated to provide R&D capability to serve an agency's mission objectives or, in some cases, to provide major facilities at universities for research and training purposes. Since FY 2001, NCSSES's FFRDC Research and Development Survey (known previously as the Survey of Research and Development Expenditures at FFRDCs) has provided annual data (by federal fiscal year) on the R&D expenditures (with additional detail) of all the nation's FFRDCs (<https://www.nsf.gov/statistics/srvyffrdc/>). Prior to FY 2001, R&D expenditure data for the FFRDCs were collected as part of the major performer surveys: the Survey of R&D Expenditures at Universities and Colleges (for university-administered FFRDCs), the Survey of Industrial R&D (for industry-administered FFRDCs), and the Federal Funds Survey (for nonprofit-administered FFRDCs).

### ***Nonfederal Government***

The category of nonfederal government R&D performance included in *National Patterns* is the intramural R&D of state governments (i.e., the R&D performance of state agency and department employees also the services performed by others in support of internal R&D projects). Data on this state intramural R&D come from NCSSES's Survey of State Government Research and Development (<https://www.nsf.gov/statistics/srvystateerd/>). This state survey is a comparatively recent NCSSES initiative, fielded on a biennial basis, with the first data year in FY 2006.

In addition, the BRDIS, FFRDC, and Higher Education Research and Development Survey (HERD) surveys (see above and below) provide detail on R&D funding by nonfederal governments other than state government.

### ***Higher Education Institutions***

For academic FY 2010 and onward, data on the R&D performed in higher education come from NCSSES's HERD. HERD is an annual census of universities and colleges that grant the bachelor's degree or higher and expend at least \$150,000 in separately accounted for R&D over the fiscal year of academic institutions (<https://www.nsf.gov/statistics/srvyherd/>). The survey collects information on R&D expenditures by field of research, source of funds, type of R&D, and head counts of R&D personnel.

The HERD Survey replaced the earlier Survey of Research and Development Expenditures at Universities and Colleges (<https://www.nsf.gov/statistics/srvyrdexpenditures/>). For data years FY 2009 and earlier, the Universities and Colleges Survey provides the data on academic R&D.

### ***Other Nonprofit Organizations***

This sector refers to R&D performed in the United States by nonprofit organizations other than government or academia. Data on the R&D performed by such nonprofit organizations that are federally

funded comes from the aforementioned NCSES Federal Funds Survey (reported annually, on federal fiscal year basis). Data for the R&D performed by other nonprofit organizations with funding from within the nonprofit sector and from business sources (both reported on calendar year basis) are estimated, based on parameters from NCSES's past comprehensive R&D surveys of the sector. NCSES's most recent Survey of Research and Development Funding and Performance by Nonprofit Organizations dates to 1973 and 1996–97 (<https://www.nsf.gov/statistics/srvyrdnonprofit/>). Data for years prior to 1973 come from earlier *National Patterns* reports (which reflect, in part, surveys in 1957 and 1960).

### ***Statistics on the U.S. Economy***

Some of the trend analyses in *National Patterns* draw on National Income and Product Accounts data (e.g., U.S. gross domestic product, state domestic product) assembled by the U.S. Bureau of Economic Activity (BEA). For details on this U.S. economic data, see <http://www.bea.gov/national/index.htm#gdp>.

In keeping with international conventions, U.S. R&D expenditures in current dollars are adjusted for inflation based on BEA's implicit GDP price deflator.

### **Methodology**

The *National Patterns* statistical picture of the U.S. R&D system arises from integration of the primary data from the NCSES sectoral R&D surveys. Adjustments to the primary data are needed in some cases to enable consistent addition. Furthermore, preliminary or otherwise estimated values may be used (and later revised) where final data from one or more of the surveys are not yet available but can reasonably be calculated.

Key features of the methodology include the following.

- Data from BRDIS are reported on a calendar year basis and are incorporated directly in the *National Patterns* totals. Data from the Federal Funds Survey and the FFRDC Research and Development Survey are reported on a federal fiscal year basis (1 October–30 September the next year) and are adjusted to the calendar year for *National Patterns* integration. The data from the HERD Survey are reported on an academic fiscal year basis (typically, 1 July–30 June the next year) and converted to calendar year. Data from the Survey of State Government R&D are reported according to each state's fiscal year and also are converted to calendar year (presuming that 1 July–30 June the next year is typical).
- The 2015–16 of *National Patterns* includes methodological improvements in the data series for higher education R&D:
  - Starting with the FY 2012 survey year, the Higher Education R&D (HERD) Survey was revised to collect an abbreviated set of data from institutions reporting less than \$1 million of R&D expenditures during the previous fiscal year. This increment of higher education R&D performance had not previously been included in the *National Patterns* total for the sector; it totaled \$143 million in FY 2012 and has ranged from \$130 million to \$150 million in subsequent years.
  - The adjustment to net out funds for R&D expenditures reported by academic institutions in the HERD Survey as passed through to subrecipients has been revised from 1998 (when the pass-through adjustment was first applied) through the estimated data for 2016. For the 1998 to 2016 survey years, the coverage of the pass-through funding adjustment was expanded to include all non-educational recipients (i.e., businesses, nonprofit organizations, and others). The effect of this revised pass-

through adjustment is that the annual totals of higher education R&D performance are about \$0.4 billion lower in 1998, the first year for this adjustment, to about \$2.5 billion lower annually in 2012 through 2015 than previously reported in *National Patterns*. For the 2010 to 2016 survey years, this more comprehensive pass-through funding adjustment was further improved by tabulating the adjustments on an institution-by-institution basis, which allows for a more precise estimate of the original non-federal sources of pass-through funds and better estimation of the type of R&D (basic, applied, or experimental development) being passed through to other R&D performers.

- The data for higher education prior to 2003 cover only science and engineering (S&E) fields; in 2003 and later years, R&D in non-S&E fields is also included. Non-S&E R&D was \$1.4 billion in FY 2003 and \$3.7 billion in FY 2015. Similarly, social science R&D was not included as part of business R&D until the 2008 data year, when it was \$0.8 billion of the \$290.7 billion business R&D total.
- The method for estimating type of R&D (i.e., basic research, applied research, experimental development) for the business sector was revised for 1998 and later years. This change resulted in a net decrease in the proportion of business R&D classified as basic research. Accordingly, the data for 1998 and later years are not directly comparable with data for 1997 and earlier years. Adoption of BRDIS (data series starting in 2008) does not appear to have introduced further discontinuities in the type-of-work estimates. For universities and colleges, the type-of-R&D estimation method was revised in 1998 and again in 2010. Hence, the latest data for higher education are also not directly comparable to those reported in earlier years.
- Data on federally funded R&D discussed in this report were derived from surveys of organizations that perform R&D, such as companies, universities, and FFRDCs. These amounts can differ substantially from the R&D that federal agencies have reported funding. For example, in 2009, federal agencies reported obligating \$141 billion for R&D funding to all R&D performers (including \$53 billion to the business sector), compared with an estimated \$127 billion in federal funding reported by all performers of R&D that year (\$40 billion by businesses). And, in 2015, federal agencies reported obligating \$129 billion for R&D funding to all R&D performers (including \$48 billion to the business sector), compared with an estimated \$113 billion in federal funding reported by all performers of R&D that year (\$20 billion by businesses). Several investigations into the possible causes for these data disparities have produced insights but no conclusive explanation; for a further discussion, see the chapter 4 sidebar [“Tracking R&D Expenditures: Disparities in the Data Reported by Performers and Sources of Funding”](#) in *Science and Engineering Indicators 2018*.<sup>1</sup>

Additional details on methodology and technical issues pertaining to specific variables are provided in the notes on each table. For further information about compiling the *National Patterns* statistics, contact the Project Officer.

## Definitions

*R&D performers and funders.* The U.S. R&D system consists of the R&D activities of differing performers and sources of funding for these activities. The main categories of R&D performers tracked by NCSSES are businesses; federal agencies; FFRDCs (administered by businesses, universities, or nonprofit organizations); nonfederal government agencies (particularly those of the states); higher education; and other nonprofit organizations. For R&D funding, the main categories are businesses; the

federal government; nonfederal government (state, regional, local); higher education; and other nonprofit organizations. Organizations that perform R&D often receive significant levels of outside funding; R&D funders may also be significant performers.

*Type of R&D.* As defined by the Organisation for Economic Co-operation and Development's *Frascati Manual* (in seven editions since the early 1960s), "R&D" spans three main types of activities:

*Basic research:* Experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts, without any particular application or use in view.

*Applied research:* Original investigation undertaken in order to acquire new knowledge. It is, however, directed primarily towards a specific, practical aim or objective.

*Experimental development:* Systematic work, drawing on knowledge gained from research and practical experience and producing additional knowledge, which is directed to producing new products or processes or to improve existing products or processes.<sup>2</sup>
